Letter of Invitation for IEM YES STEM DAY-Short Video Competition

Dear Sir/Madam,

On behalf of the Institution of Engineers, Malaysia - Young Engineers Section, we are inviting your organization or school to join our IEM YES STEM Day. This event consists of competition, webinars, forum, sharing session from graduate engineers and interactions activities which target secondary school and tertiary school students. We aim to engage students and provide critical learning skill, problem solving, innovative and creative skills that are beyond the knowledge from school. The theme of event is the “**Key to the Future**”, STEM education stands for Science, Technology, Engineering and Mathematics. Human’s technology has been growing exponentially throughout these few days as the knowledge of human being is broadly explored and employed in our real-life application. Hence, young and future engineers should take up this duty to ensure that our future that beyond our imagination can be achieved.

We are writing this letter to invite your students to join our short video competition. They will be given a topic where required them to present the solution through a 3 to 5 minutes short video. The main objective of this competition is to test their engineering and sustainable knowledge on solving the crisis in the future. At the meantime, we also realise engineering students should not be focusing on technical where their innovatively and creativity is important as the new era is emerging. We hope your organization/school can share these activities among the students.

Besides, we will also have webinars, forum, sharing session and interaction games which they can learn and have fun in our event. Please revert if your organization/school is interested in joining our events. We will forward the zoom meeting link once we arrange all the information.

If you'd like to have more information on the upcoming event, please share our social media among your student (<https://www.facebook.com/iemyeskl>). Please email us if you need further explanation on our event.

Sincerely,

Chuah Pei Lim and the STEM DAY Committees

IEM YES HQ
